

# RAM Grow 7 Factsheet

30 June 2024

For your brighter future

## Portfolio Aim

The investment objective of the portfolio is to provide capital growth and risk exposure predominantly in line with global equity markets. The base currency of the portfolio is GBP sterling.

RAM Grow 7 aims to achieve an annual return in the range of 8.1% - 11.1% with a volatility in the range of 12.6% - 14.7%.

The portfolio is diversified through exposure to range of geographies and asset classes including bonds, equities, inflation sensitive, absolute return, income and cash holdings. This diversification is designed to limit the vulnerability to fluctuations of any one particular asset class and to help ensure the portfolio remains in line with its investment objective.

RAM Grow 7 is Risk Target Managed to Dynamic Planner risk profiles and is aligned to a risk rating 7.

## Target Market

Retail clients looking to invest over a period of more than ten years and who are happy to accept a degree of investment risk (at least Dynamic Planner level 7), have the capacity to absorb a level of financial loss and an FCA regulated Financial Planner to help assess suitability. This portfolio is not suitable for clients who require guaranteed returns.

## Cumulative Returns\*

### Key Risks:

- Past performance is not a guide to future performance.
- The value of an investment, and any income from it, can fall or rise. Investors may not get back the full amount they invest.
- Investment in the portfolio carries the risk of potential total loss of capital.

### Important Performance Information

\*Performance data from 30/11/2015 to 18/04/2022 is calculated using a simulated track record provided by SEI Global Investment Management Limited. Performance from 19/04/2022 to last month end is an actual live track record, sourced from RAM. Unlike actual performance, simulated results do not represent an actual fund track record. The data shown relates to simulated past performance. Simulated past performance is not a reliable indicator of future results. This simulation does not represent SEI's ability within the underlying funds to make decisions on which positions to include. There is no guarantee this algorithm will be successful in the future or that the same algorithm would have been used if the fund was actually being managed at the time. More information about the simulation is available upon request. Performance on this factsheet may differ from the MPS performance across platforms due to slight variations of the way cash is held.
